Alfio Scilio

AI-assisted automation · Python tooling · Digital operations

Open to fully remote opportunities. Personal projects explore practical AI, reliable data workflows, trading execution mechanics and e-commerce operations.

SELECTED PUBLIC DEMONSTRATIONS

CSV Quality Pipeline

Strict schema validation, finite decimal amounts, explicit rejection reasons and reproducible HTML quality reports.

github.com/scil95-dotcom/csv-quality-pipeline

LLM Workflow Lab

Versioned prompts, structured outputs, bounded retries, human review gates, mock fixture evaluation and an optional local Ollama adapter.

github.com/scil95-dotcom/llm-workflow-lab

Trading Replay Lab

Offline paper execution, explicit fees and slippage, position limits, a hard stop and an auditable replay using synthetic prices.

github.com/scil95-dotcom/trading-replay-lab

E-commerce Ops Lab

Idempotent events, inventory reservations, oversell prevention, cancellation handling and visible fulfillment exceptions.

github.com/scil95-dotcom/ecommerce-ops-lab

PROJECT PRACTICES

Python · Git / GitHub · Automated tests · JSON / CSV validation · Prompt engineering · Local AI workflows · Technical documentation · Async review artifacts

ADDITIONAL PROJECT CONTEXT

Private projects explore a Next.js / React / TypeScript reading platform, public market-feed observation and reproducible research handoffs. Market experiments remain stopped.

SCOPE & AUTHORSHIP

Personal portfolio demos, developed with AI assistance and checked with automated tests. All public examples are synthetic. Mock fixtures validate workflow contracts; real model quality requires separate evaluation. Trading replay illustrates execution mechanics. Education and work history remain on LinkedIn.
